[Time Management]   [Quick Learner]

PROJECTS

TrackOn-A bus tracking system

The basic idea for this project is to display maps and track vehicle's location and show the estimated remaining time required to reach. The aim is to overcome all the drawbacks faced by students while travelling to college.It is done through TTGO SIM7000G Module ESP32 IoT device for tracking the bus

Travel with Us

It is a multipage responsive informative website which displays the tourist places and information for the tourists to guide them about the places.It is built using HTML,CSS.

Grow Chat-Chatting Mobile Application

It is a chatting application built to keep professional chat separate from personal chats which indeed helps productivity in the during work.The application was developed with the help of java as the front end and firebase was used for the backend. It uses a real time database of the firebase.
